Date:

#### **The Thinking Dog – Training for Success**

Understanding canine cognition and how cognitive processes such as, canine perception, focus, and problem solving impact learning behavior and performance. Learn how to use positive reinforcement, shaping and desensitization techniques to strengthen behavior and eliminate fear, anxiety and distress; achieving resiliency and maximum performance in the working dog.

Date:

#### **Canine Cognitive Health**

#### **Relationship – Behavior – Performance**

Keeping your dog mentally healthy requires positive mental and physical stimulation throughout their lifetime. Learn how this can be accomplished through mental and physical games such as learning tricks, puzzle solving, guided play, and through behavior and performance training. Explore how positive learning and performance stimulate essential activity required for neural growth and cognitive health. A dog that is mentally and physically healthy is more able to deal with stress effectively and achieve maximum performance, while also increasing longevity. Relationship, Behavior, and Performance: Keys to a happy and healthy dog!
